

Medicare has recognized the validity and healing properties of Hyperbaric Oxygen Therapy (HBOT) in humans for over 20 years. Now, a hyperbaric chamber has been made exclusively for small animals.

We are proud to be among the first in the nation to have this revolutionary piece of medical technology to provide your pet with the finest health care available.

HBOT is Covered by most pet insurance companies for conditions under policies.

Veterinarians can now offer HBOT to their patients and referral clients, with the acceptance of trusted and established pet insurance organizations, and deliver consistently positive results in challenging and difficult cases.

What is Hyperbaric Oxygen Therapy?

Hyperbaric Oxygen Therapy (HBOT) is capable of safely delivering 100% pure oxygen to tissues in the body due to the atmospheric pressure inside the chamber. HBOT is useful in a variety of clinical situations and is most often given in combination with other modes of therapy.

How is HBOT Administered?

The patient is placed into a hyperbaric chamber designed specifically for small animals. At a maximum of 2 Atmospheric Pressure (ATA), and closely monitored by trained staff members, 100% pure oxygen treatments are given one to two times daily with each treatment lasting about 1 hour.

How Safe is HBOT?

Breathing 100% oxygen at 2ATA for 60 minutes is a remarkably safe regimen. Patients are not required to undergo any sedation and can remain calm and relaxed during treatment.

In addition, all chamber operators are tested, certified and follow strict safety guidelines which ensure your pet is receiving optimum care.

Hope . . .

. . . a two-year-old black Labrador Retriever was found in Miami, FL with severe burns on over 40 percent of her body due to the malicious use of chemicals and fire. When Hope was discovered she was a skittish animal with a very small chance of survival.

Hope received emergency care, which included 35 total treatments inside a hyperbaric chamber designed exclusively for pets. HBOT is very effective in reducing inflammation to hasten post-surgical recovery and assist with many difficult-to-heal wounds.

Hope emerged from her treatments 99 percent healed. During that time her temperament transformed from frightful and distant to warm and playful. Today Hope is healthy and thriving as she was adopted almost immediately by a loving family.
